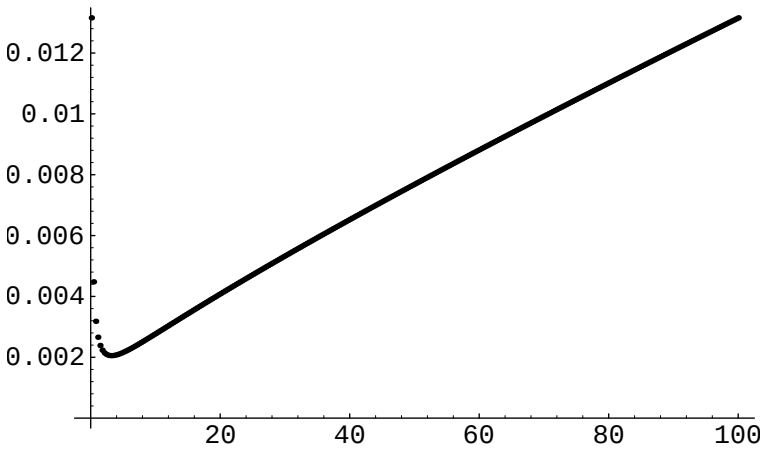
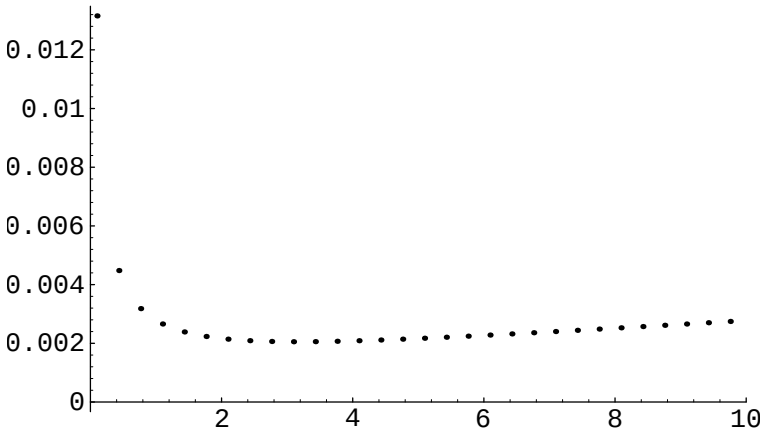
Stability Data

The following is a run of the stability driver. The value of "a" was fixed at .1, while the other two axes lengths when multiplied together yielded 10 (i.e. pseudo-volume fixed at 1).

```
ListPlot[stabilitydata]
```

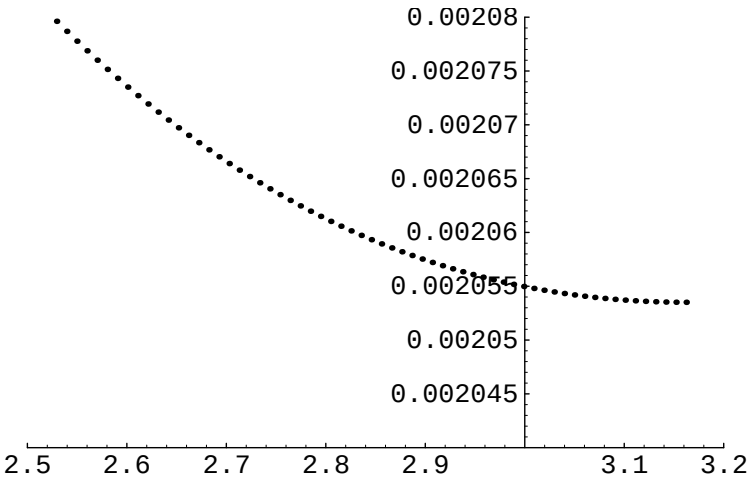


```
ListPlot[ stabilitydata, PlotRange->{{0,10},Automatic}];
```



Another run, to the disk shape

```
ListPlot[ shortdata , PlotRange->{{2.5,3.2},{.00204,.00208}}]
```



```
-Graphics-
```
