

Fluids with Memory – Chapter 8	
What does this r	$\begin{array}{ll} \text{model predict?} & \text{Simple memory fluid} \\ \hline -\underline{\tau}(t) = \tilde{\eta} \underline{\dot{\gamma}}(t) + (0.8 \tilde{\eta}) \underline{\dot{\gamma}}(t - t_0) \end{array}$
Steady shear	$\eta = ?$ $\Psi_1 = ?$ $\Psi_2 = ?$
Shear start-up	$\eta^{+}(t) = ?$ $\Psi_{1}^{+}(t) = ?$ $\Psi_{2}^{+}(t) = ?$

Fluids with Memory – Chapter 8		
What does this r	model predict? $-\underline{\underline{\tau}}(t) = \hat{t}$	Simple memory fluid $\tilde{j}\dot{\underline{\gamma}}(t) + (0.8\tilde{\eta})\dot{\underline{\gamma}}(t-t_0)$
Steady shear	$\eta = ?$ $\Psi_1 = ?$ $\Psi_2 = ?$	Let's try.
Shear start-up	$\eta^{+}(t) = ?$ $\Psi_{1}^{+}(t) = ?$ $\Psi_{2}^{+}(t) = ?$

Fluids w	ith Memory – Chapt	er 8	
_	Predictions of	the simple memory $-\underline{\underline{\tau}}(t) =$	ry fluid = $\tilde{\eta} \dot{\underline{\gamma}}(t) + (0.8 \tilde{\eta}) \dot{\underline{\gamma}}(t - t_0)$
	Steady shear	$\eta = 1.8\tilde{\eta}$ $\Psi_1 = \Psi_2 = 0$	The steady viscosity reflects contributions from what is currently happening and contributions from what happened $t_0$ seconds ago.
	Shear start-up	( 0	<i>t</i> < 0
		$\eta^+(t) = \begin{cases} \tilde{\eta} \end{cases}$	$0 \le t \le t_0$
		$\left(1.8\hat{\eta}\right)$	$\check{t} = t_0$
_		$\Psi_1^+(t) = \Psi_2^+(t)$	t) = 0

Fluids \	with Memory – Chapte	er 8		
	Predictions of	the Generalized Max	well Model	
	$2N \text{ model parame} \\ g_k, \lambda_k \text{ (constant} \\ (\eta_k = g_k \lambda_k)$	ters: s) $\underline{\tau}(t) = -\int_{-\infty}^{t}$	$\left[\sum_{k=1}^{N} \frac{\eta_{k}}{\lambda_{k}} e^{\frac{-(t-t)}{\lambda_{k}}}\right] \underline{\dot{\gamma}}(t') dt'$	
	Steady shear	$\eta = \sum_{k=1}^{N} \eta_k$	Fails to predict shear normal stresses	
		$\Psi_1 = \Psi_2 = 0$	Fails to predict shear- thinning	
	Step shear strain	$G(t) = \sum_{k=1}^{N} \frac{\eta_k}{\lambda_k} e^{-t/\lambda_k}$	This function can fit <u>any</u> observed data (we show how)	
		$G_{\Psi_1} = G_{\Psi_2} = 0$	Note that the GMM does not predict shear normal stresses.
