The 14th International ASM Workshop is devoted to all aspects of the theory and applications of Abstract State Machines in SW/HW engineering, including the development of ASM tool support and industrial applications. The workshop programme includes presentation of research papers as well as workshop discussions.

**Programme**

There will be the following invited talks at the workshop:
- Michael Altenhofen (SAP): on Design and analysis of web services
- Don Batory (University of Texas): On the Compositional Structure of Software Products
- Giampaolo Bella (Università di Catania): What is Correctness of Security Protocols?
- Yuri Gurevich (Microsoft Research, Redmond, USA): The Background of a Computation
- Jakob Rehof (Fraunhofer ISST): Software Architectures for Security

We will have eight presentation sessions for 19 refereed papers and 6 invited papers. For a more focused discussion, we have scheduled two special sessions.
- Special Session on ASM Tools: Execution, Analysis, Validation, and Verification
- Special Session on ASMs for Software Architecture: Principles, Application, and Examples

Finally, there is time for discussions and tool presentations. All currently supported ASM tools are on display.

For the complete programme, see the conference web pages.

**Venue**

Grimstad is the town in Norway with one of the highest number of recorded days of sunshine! It is situated in south Norway, 50 km east of Kristiansand. Grimstad was awarded town status as far back as 1816 and today the population is above 18,000. Here peace and quiet prevails, and Grimstad is an excellent place for those seeking to relax and enjoy life by 'the wonderful sea and the waves'. The conference will take place in the Grimstad campus of the Agder University College with good computer facilities and a beautiful surrounding for nice walks.

**Registration**

Electronic registration is open via the conference web site. Early birds’ rates are valid until May 23. Special rates for students are also available, but places are limited.
