Goals For This Talk

My goals in this talk include the following:

- ▶ Share some thoughts regarding cubic partitions
- ▶ Discuss Merca's recent work on cubic partitions, with special focus on his recent congruences and the proofs he provided
- ▶ Describe work that Robson and I have since completed to prove Merca's results as well as (newly identified) infinite families of congruences for these objects using truly elementary methods

Congruences

Introductory Thoughts

The primary combinatorial objects on which we will focus our attention today are known as *cubic partitions*.

These are integer partitions wherein the even parts are allowed to appear in two different colors.

Cubic partitions were introduced by Hei-Chi Chan in 2010 in connection with Ramanujan's cubic continued fraction.

Introductory Thoughts

In a recent publication in the *Ramanujan Journal*, Mircea Merca extensively studied a function which he denoted as $A(n)$ and is defined to be the difference between the number of cubic partitions of n into an even numbers of parts and the number of cubic partitions of n into an odd numbers of parts.

Congruences

New Infinite
Families of
Congruences

Introductory Thoughts

In a recent publication in the *Ramanujan Journal*, Mircea Merca extensively studied a function which he denoted as $A(n)$ and is defined to be the difference between the number of cubic partitions of n into an even numbers of parts and the number of cubic partitions of n into an odd numbers of parts.

Merca noted that the generating function for $A(n)$ is given by

$$\sum_{n=0}^{\infty} A(n)q^n = (q; q^2)_{\infty} (q^2; q^4)_{\infty} = \frac{f_1}{f_4}$$

where $(a; q)_{\infty} = (1 - a)(1 - aq)(1 - aq^2)(1 - aq^3) \dots$ and

$$f_a^b = (q^a; q^a)_{\infty}^b.$$

Introductory Thoughts

In his paper, Merca proved the following two Ramanujan–like congruences satisfied by $A(n)$:

Introductory
Thoughts

Elementary Proofs
of Merca's
Congruences

New Infinite
Families of
Congruences

Introductory Thoughts

In his paper, Merca proved the following two Ramanujan-like congruences satisfied by $A(n)$:

For all $n \geq 0$,

$$\begin{aligned}A(9n + 5) &\equiv 0 \pmod{3}, \\A(27n + 26) &\equiv 0 \pmod{3}.\end{aligned}$$

Introductory Thoughts

In his paper, Merca proved the following two Ramanujan-like congruences satisfied by $A(n)$:

For all $n \geq 0$,

$$\begin{aligned}A(9n + 5) &\equiv 0 \pmod{3}, \\A(27n + 26) &\equiv 0 \pmod{3}.\end{aligned}$$

Merca's proof of these two congruences relies solely on Smoot's Mathematica implementation of Radu's algorithm for proving partition congruences (which relies heavily on the machinery of modular forms).

Introductory Thoughts

In his paper, Merca proved the following two Ramanujan–like congruences satisfied by $A(n)$:

For all $n \geq 0$,

$$\begin{aligned}A(9n + 5) &\equiv 0 \pmod{3}, \\A(27n + 26) &\equiv 0 \pmod{3}.\end{aligned}$$

Merca's proof of these two congruences relies solely on Smoot's *Mathematica* implementation of Radu's algorithm for proving partition congruences (which relies heavily on the machinery of modular forms).

The relevant generating functions found via Smoot's package are the following:

Introductory Thoughts

$$\begin{aligned} & \sum_{n=0}^{\infty} A(9n+5)q^n \\ &= -\frac{3q(q^2; q^2)_{\infty}^3 (q^3; q^3)_{\infty} (q^{12}; q^{12})_{\infty}^6}{(q; q)_{\infty}^2 (q^4; q^4)_{\infty}^3 (q^6; q^6)_{\infty}^5} + \frac{9q^2(q^2; q^2)_{\infty}^5 (q^3; q^3)_{\infty} (q^{12}; q^{12})_{\infty}^{10}}{(q; q)_{\infty}^2 (q^4; q^4)_{\infty}^7 (q^6; q^6)_{\infty}^7} \\ &+ \frac{3q^3(q^2; q^2)_{\infty}^7 (q^3; q^3)_{\infty} (q^{12}; q^{12})_{\infty}^{14}}{(q; q)_{\infty}^2 (q^4; q^4)_{\infty}^{11} (q^6; q^6)_{\infty}^9} - \frac{9q^4(q^2; q^2)_{\infty}^9 (q^3; q^3)_{\infty} (q^{12}; q^{12})_{\infty}^{18}}{(q; q)_{\infty}^2 (q^4; q^4)_{\infty}^{15} (q^6; q^6)_{\infty}^{11}}. \end{aligned}$$

Elementary Proofs of Merca's Congruences

We are now in a position to provide our proof of Merca's first congruence, which states that, for all $n \geq 0$,

$$A(9n + 5) \equiv 0 \pmod{3}.$$

We begin by using the first two dissection lemmas mentioned above to extract the terms involving q^{3n+2} in the original generating function:

Elementary Proofs of Merca's Congruences

We are now in a position to provide our proof of Merca's first congruence, which states that, for all $n \geq 0$,

$$A(9n + 5) \equiv 0 \pmod{3}.$$

We begin by using the first two dissection lemmas mentioned above to extract the terms involving q^{3n+2} in the original generating function:

$$\sum_{n=0}^{\infty} A(3n + 2)q^{3n+2} = q^2 \frac{f_6^4 f_9^5 f_{36}^3}{f_3^4 f_{12}^4 f_{18}^4} - 2q^2 \frac{f_6 f_{18}^5}{f_3^2 f_9 f_{12}^3}.$$

Elementary Proofs of Merca's Congruences

We are now in a position to provide our proof of Merca's first congruence, which states that, for all $n \geq 0$,

$$A(9n + 5) \equiv 0 \pmod{3}.$$

We begin by using the first two dissection lemmas mentioned above to extract the terms involving q^{3n+2} in the original generating function:

$$\sum_{n=0}^{\infty} A(3n + 2)q^{3n+2} = q^2 \frac{f_6^4 f_9^5 f_{36}^3}{f_3^4 f_{12}^4 f_{18}^4} - 2q^2 \frac{f_6 f_9^5}{f_3^2 f_9 f_{12}^3}.$$

Dividing by q^2 and replacing q^3 by q yields

$$\begin{aligned} \sum_{n=0}^{\infty} A(3n + 2)q^n &= \frac{f_2^4 f_3^5 f_{12}^3}{f_1^4 f_4^4 f_6^4} - 2 \frac{f_2 f_6^5}{f_1^2 f_3 f_4^3} \\ &\equiv \left(\frac{f_2}{f_1 f_4} \right) \frac{f_3^4 f_{12}^2}{f_6^3} - 2 \left(\frac{f_2}{f_1^2} \right) \frac{f_6^5}{f_3 f_{12}} \pmod{3}. \end{aligned}$$

Elementary Proofs of Merca's Congruences

Using the second and third dissection lemmas, we next extract the terms of the form q^{3n+1} from both sides of the last congruence to obtain

Elementary Proofs of Merca's Congruences

Using the second and third dissection lemmas, we next extract the terms of the form q^{3n+1} from both sides of the last congruence to obtain

$$\begin{aligned}\sum_{n=0}^{\infty} A(9n+5)q^{3n+1} &\equiv q \frac{f_3 f_{18}^3}{f_6 f_{12}} - 4q \frac{f_6^8 f_9^3}{f_3^8 f_{12}} \pmod{3} \\ &\equiv q \frac{f_3 f_{18}^3}{f_6 f_{12}} - 4q \frac{f_3}{f_6 f_{12}} \frac{f_6^9 f_9^3}{f_3^9} \pmod{3}\end{aligned}$$

Elementary Proofs of Merca's Congruences

Using the second and third dissection lemmas, we next extract the terms of the form q^{3n+1} from both sides of the last congruence to obtain

$$\begin{aligned}\sum_{n=0}^{\infty} A(9n+5)q^{3n+1} &\equiv q \frac{f_3 f_{18}^3}{f_6 f_{12}} - 4q \frac{f_6^8 f_9^3}{f_3^8 f_{12}} \pmod{3} \\ &\equiv q \frac{f_3 f_{18}^3}{f_6 f_{12}} - 4q \frac{f_3}{f_6 f_{12}} \frac{f_6^9 f_9^3}{f_3^9} \pmod{3} \\ &\equiv -3q \frac{f_3 f_{18}^3}{f_6 f_{12}} \pmod{3}\end{aligned}$$

Elementary Proofs of Merca's Congruences

Using the second and third dissection lemmas, we next extract the terms of the form q^{3n+1} from both sides of the last congruence to obtain

$$\begin{aligned}\sum_{n=0}^{\infty} A(9n+5)q^{3n+1} &\equiv q \frac{f_3 f_{18}^3}{f_6 f_{12}} - 4q \frac{f_6^8 f_9^3}{f_3^8 f_{12}} \pmod{3} \\ &\equiv q \frac{f_3 f_{18}^3}{f_6 f_{12}} - 4q \frac{f_3}{f_6 f_{12}} \frac{f_6^9 f_9^3}{f_3^9} \pmod{3} \\ &\equiv -3q \frac{f_3 f_{18}^3}{f_6 f_{12}} \pmod{3} \\ &\equiv 0 \pmod{3}.\end{aligned}$$

Elementary Proofs of Merca's Congruences

Using the second and third dissection lemmas, we next extract the terms of the form q^{3n+1} from both sides of the last congruence to obtain

$$\begin{aligned}\sum_{n=0}^{\infty} A(9n+5)q^{3n+1} &\equiv q \frac{f_3 f_{18}^3}{f_6 f_{12}} - 4q \frac{f_6^8 f_9^3}{f_3^8 f_{12}} \pmod{3} \\ &\equiv q \frac{f_3 f_{18}^3}{f_6 f_{12}} - 4q \frac{f_3}{f_6 f_{12}} \frac{f_6^9 f_9^3}{f_3^9} \pmod{3} \\ &\equiv -3q \frac{f_3 f_{18}^3}{f_6 f_{12}} \pmod{3} \\ &\equiv 0 \pmod{3}.\end{aligned}$$

This proves Merca's first congruence. □

Elementary Proofs of Merca's Congruences

We now consider Merca's second congruence, that for all $n \geq 0$,

$$A(27n + 26) \equiv 0 \pmod{3}.$$

Elementary Proofs
of Merca's
Congruences

New Infinite
Families of
Congruences

Elementary Proofs of Merca's Congruences

We now consider Merca's second congruence, that for all $n \geq 0$,

$$A(27n + 26) \equiv 0 \pmod{3}.$$

To do so, we return to the fact that

$$\sum_{n=0}^{\infty} A(3n+2)q^n \equiv \left(\frac{f_2}{f_1 f_4}\right) \frac{f_3^4 f_{12}^2}{f_6^3} - 2 \left(\frac{f_2}{f_1^2}\right) \frac{f_6^5}{f_3 f_{12}} \pmod{3}.$$

Elementary Proofs of Merca's Congruences

We now consider Merca's second congruence, that for all $n \geq 0$,

$$A(27n + 26) \equiv 0 \pmod{3}.$$

To do so, we return to the fact that

$$\sum_{n=0}^{\infty} A(3n+2)q^n \equiv \left(\frac{f_2}{f_1 f_4}\right) \frac{f_3^4 f_{12}^2}{f_6^3} - 2 \left(\frac{f_2}{f_1^2}\right) \frac{f_6^5}{f_3 f_{12}} \pmod{3}.$$

We then use the second and third lemmas above to extract the terms of the form q^{3n+2} from both sides of the above:

Elementary Proofs of Merca's Congruences

We now consider Merca's second congruence, that for all $n \geq 0$,

$$A(27n + 26) \equiv 0 \pmod{3}.$$

To do so, we return to the fact that

$$\sum_{n=0}^{\infty} A(3n+2)q^n \equiv \left(\frac{f_2}{f_1 f_4}\right) \frac{f_3^4 f_{12}^2}{f_6^3} - 2 \left(\frac{f_2}{f_1^2}\right) \frac{f_6^5}{f_3 f_{12}} \pmod{3}.$$

We then use the second and third lemmas above to extract the terms of the form q^{3n+2} from both sides of the above:

$$\sum_{n=0}^{\infty} A(9n + 8)q^{3n+2} \equiv q^2 \frac{f_6 f_9^3 f_{36}^3}{f_{12}^2 f_{18}^3} - 8q^2 \frac{f_6^7 f_{18}^3}{f_3^7 f_{12}} \pmod{3}.$$

Elementary Proofs of Merca's Congruences

Dividing by q^2 and replacing q^3 by q , we obtain

$$\begin{aligned}\sum_{n=0}^{\infty} A(9n+8)q^n &\equiv \frac{f_2 f_3^3 f_{12}^3}{f_4^2 f_6^3} - 8 \frac{f_2^7 f_6^3}{f_1^7 f_4} \pmod{3} \\ &\equiv \left(\frac{f_2}{f_4^2}\right) \frac{f_3^3 f_{12}^3}{f_6^3} - 8 \left(\frac{f_2}{f_1 f_4}\right) \frac{f_6^5}{f_3^2} \pmod{3}.\end{aligned}$$

Elementary Proofs of Merca's Congruences

Dividing by q^2 and replacing q^3 by q , we obtain

$$\begin{aligned}\sum_{n=0}^{\infty} A(9n+8)q^n &\equiv \frac{f_2 f_3^3 f_{12}^3}{f_4^2 f_6^3} - 8 \frac{f_2^7 f_6^3}{f_1^7 f_4} \pmod{3} \\ &\equiv \left(\frac{f_2}{f_4^2}\right) \frac{f_3^3 f_{12}^3}{f_6^3} - 8 \left(\frac{f_2}{f_1 f_4}\right) \frac{f_6^5}{f_3^2} \pmod{3}.\end{aligned}$$

Now we employ the second and fourth lemmas to extract the terms of the form q^{3n+2} from the congruence above.

Elementary Proofs of Merca's Congruences

Dividing by q^2 and replacing q^3 by q , we obtain

$$\begin{aligned}\sum_{n=0}^{\infty} A(9n+8)q^n &\equiv \frac{f_2 f_3^3 f_{12}^3}{f_4^2 f_6^3} - 8 \frac{f_2^7 f_6^3}{f_1^7 f_4} \pmod{3} \\ &\equiv \left(\frac{f_2}{f_4^2}\right) \frac{f_3^3 f_{12}^3}{f_6^3} - 8 \left(\frac{f_2}{f_1 f_4}\right) \frac{f_6^5}{f_3^2} \pmod{3}.\end{aligned}$$

Now we employ the second and fourth lemmas to extract the terms of the form q^{3n+2} from the congruence above.

The resulting congruence after division by q^2 and replacing q^3 by q is given by the following:

Something more appears to be true!

New Infinite Families of Congruences

Given past experience with such phenomenon, I decided to hunt for an “internal” congruence modulo 3 which is satisfied by $A(n)$. And Maple found it for me immediately.

Theorem: For all $n \geq 0$,

$$A(27n + 8) \equiv A(3n + 1) \pmod{3}.$$

You might wonder, “Why should I care?” (about such an internal congruence)

In essence, internal congruences of this type sometimes exist and can provide the induction step of the proof of an infinite family of congruences where the modulus does not grow as the arithmetic progressions change.

New Infinite Families of Congruences

Let's now prove this internal congruence:

New Infinite Families of Congruences

Let's now prove this internal congruence:

Theorem: For all $n \geq 0$,

$$A(27n + 8) \equiv A(3n + 1) \pmod{3}.$$

We prove this theorem by simply showing that the generating functions for $A(27n + 8)$ and $A(3n + 1)$ are congruent to one another modulo 3.

New Infinite Families of Congruences

Let's now prove this internal congruence:

Theorem: For all $n \geq 0$,

$$A(27n + 8) \equiv A(3n + 1) \pmod{3}.$$

We prove this theorem by simply showing that the generating functions for $A(27n + 8)$ and $A(3n + 1)$ are congruent to one another modulo 3.

So we need to perform a few more dissections like the ones we completed above.

New Infinite Families of Congruences

First, we return to the generating function for $A(n)$, written as $\frac{\phi(-q)}{\psi(-q)}$, and use the first two dissection lemmas mentioned earlier to obtain the following:

Congruences

New Infinite Families of Congruences

We are now ready to state and prove our two (NEW) infinite families of congruences modulo 3 satisfied by $A(n)$.

The first of our Ramanujan-like families is the following:

Theorem: For all $j \geq 0$ and all $n \geq 0$,

$$A\left(9^{j+1}n + \frac{39 \cdot 9^j + 1}{8}\right) \equiv 0 \pmod{3}.$$

New Infinite Families of Congruences

We are now ready to state and prove our two (NEW) infinite families of congruences modulo 3 satisfied by $A(n)$.

The first of our Ramanujan-like families is the following:

Theorem: For all $j \geq 0$ and all $n \geq 0$,

$$A\left(9^{j+1}n + \frac{39 \cdot 9^j + 1}{8}\right) \equiv 0 \pmod{3}.$$

Let's pause and check to see what these represent:

New Infinite Families of Congruences

We are now ready to state and prove our two (NEW) infinite families of congruences modulo 3 satisfied by $A(n)$.

The first of our Ramanujan-like families is the following:

Theorem: For all $j \geq 0$ and all $n \geq 0$,

$$A\left(9^{j+1}n + \frac{39 \cdot 9^j + 1}{8}\right) \equiv 0 \pmod{3}.$$

Let's pause and check to see what these represent:

The $j = 0$ case gives $A(9n + 5) \equiv 0 \pmod{3}$.

New Infinite Families of Congruences

We are now ready to state and prove our two (NEW) infinite families of congruences modulo 3 satisfied by $A(n)$.

The first of our Ramanujan-like families is the following:

Theorem: For all $j \geq 0$ and all $n \geq 0$,

$$A\left(9^{j+1}n + \frac{39 \cdot 9^j + 1}{8}\right) \equiv 0 \pmod{3}.$$

Let's pause and check to see what these represent:

The $j = 0$ case gives $A(9n + 5) \equiv 0 \pmod{3}$.

The $j = 1$ case gives $A(81n + 44) \equiv 0 \pmod{3}$.

New Infinite Families of Congruences

The proof of this result is rather straightforward and consists of an induction proof on j .

New Infinite Families of Congruences

The proof of this result is rather straightforward and consists of an induction proof on j .

The basis case, $j = 0$, has already been proven (it was Merca's first congruence, and we proved that earlier.)

To check the induction step, we assume that, for all $n \geq 0$,

$$A \left(9^{j+1}n + \frac{39 \cdot 9^j + 1}{8} \right) \equiv 0 \pmod{3}$$

for some j .

New Infinite Families of Congruences

The proof of this result is rather straightforward and consists of an induction proof on j .

The basis case, $j = 0$, has already been proven (it was Merca's first congruence, and we proved that earlier.)

To check the induction step, we assume that, for all $n \geq 0$,

$$A \left(9^{j+1}n + \frac{39 \cdot 9^j + 1}{8} \right) \equiv 0 \pmod{3}$$

for some j .

We want to prove that, for all $n \geq 0$,

$$A \left(9^{j+2}n + \frac{39 \cdot 9^{j+1} + 1}{8} \right) \equiv 0 \pmod{3}.$$

New Infinite Families of Congruences

Note that

$$9^{j+2}n + \frac{39 \cdot 9^{j+1} + 1}{8} = 27 \left(3 \cdot 9^j n + \frac{13 \cdot 9^j}{8} - \frac{7}{24} \right) + 8.$$

New Infinite Families of Congruences

Note that

$$9^{j+2}n + \frac{39 \cdot 9^{j+1} + 1}{8} = 27 \left(3 \cdot 9^j n + \frac{13 \cdot 9^j}{8} - \frac{7}{24} \right) + 8.$$

Thanks to our internal congruence, we know that, for all $n \geq 0$,

$$A(27n + 8) \equiv A(3n + 1) \pmod{3}.$$

New Infinite Families of Congruences

Note that

$$9^{j+2}n + \frac{39 \cdot 9^{j+1} + 1}{8} = 27 \left(3 \cdot 9^j n + \frac{13 \cdot 9^j}{8} - \frac{7}{24} \right) + 8.$$

Thanks to our internal congruence, we know that, for all $n \geq 0$,

$$A(27n + 8) \equiv A(3n + 1) \pmod{3}.$$

New Infinite Families of Congruences

Note that

$$9^{j+2}n + \frac{39 \cdot 9^{j+1} + 1}{8} = 27 \left(3 \cdot 9^j n + \frac{13 \cdot 9^j}{8} - \frac{7}{24} \right) + 8.$$

Thanks to our internal congruence, we know that, for all $n \geq 0$,

$$A(27n + 8) \equiv A(3n + 1) \pmod{3}.$$

This provides us with the engine we need for the induction step!
